

## Build Playlist Interface

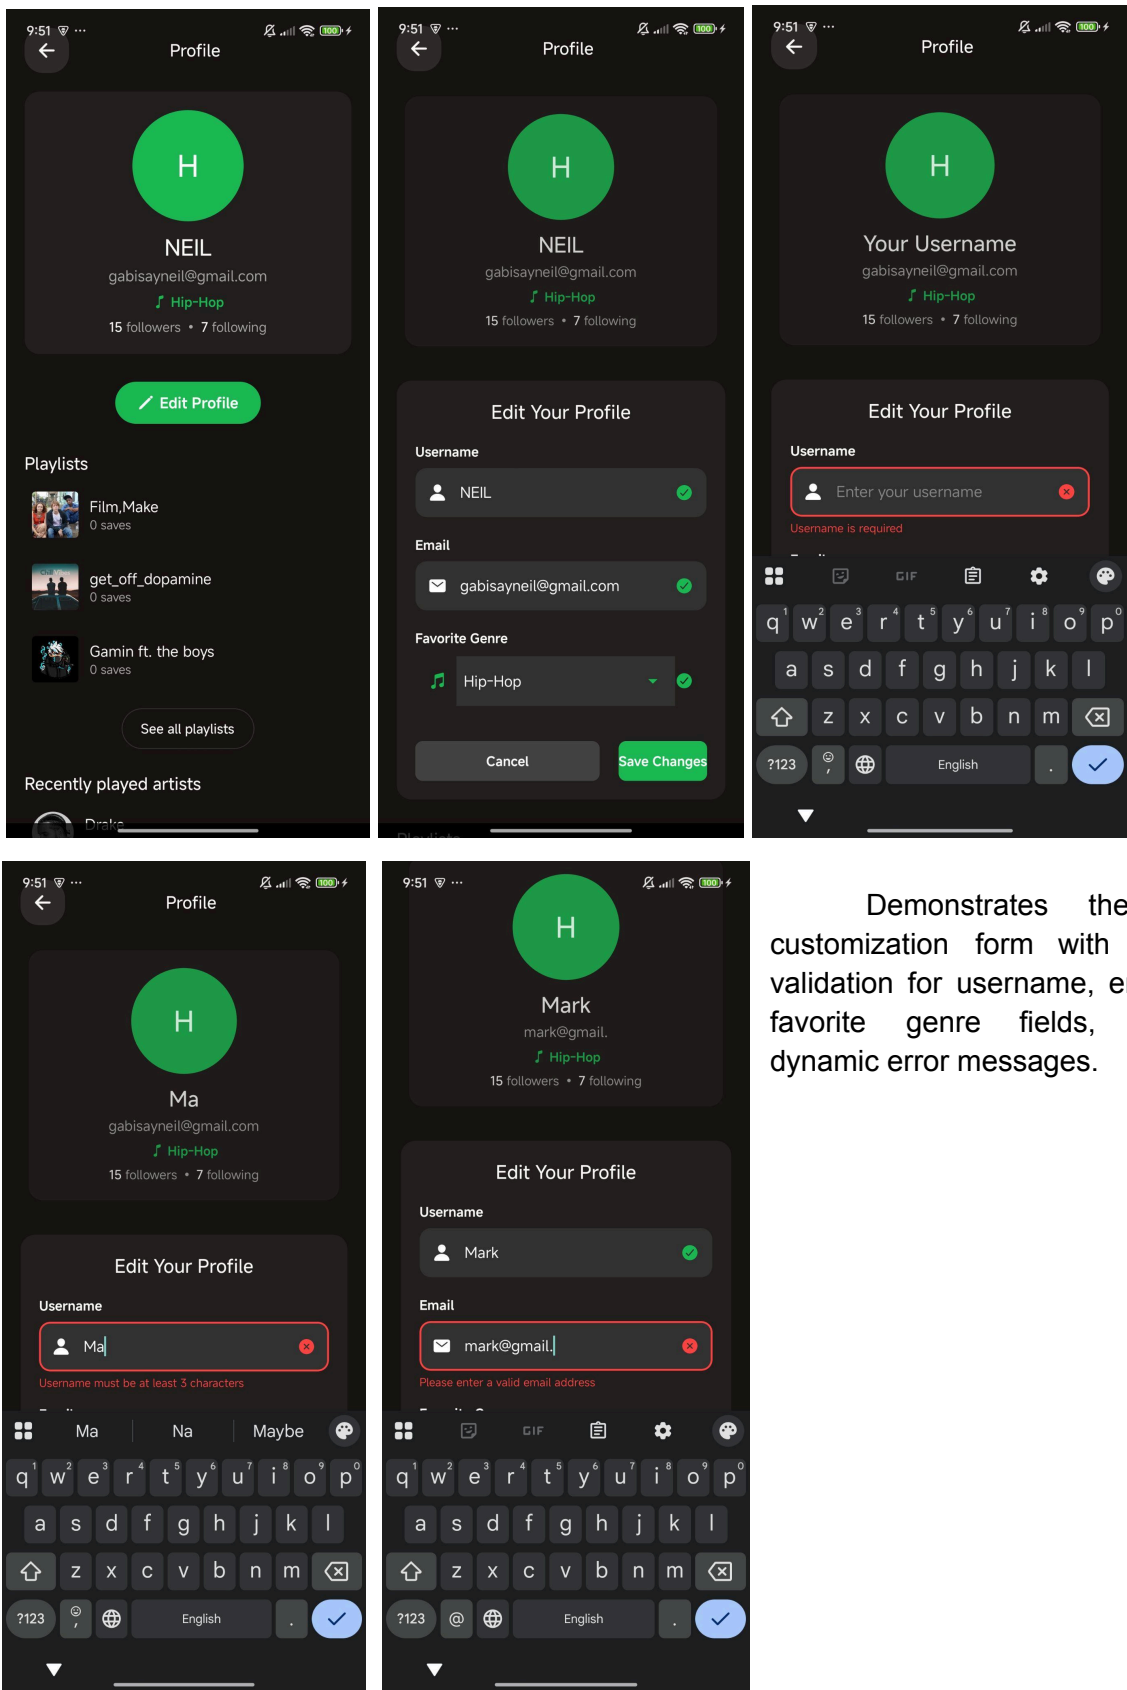

Displays the playlist interface with profile and settings icons. Users can add new playlists, view recently played songs, and interact

## Implement Undo/Redo

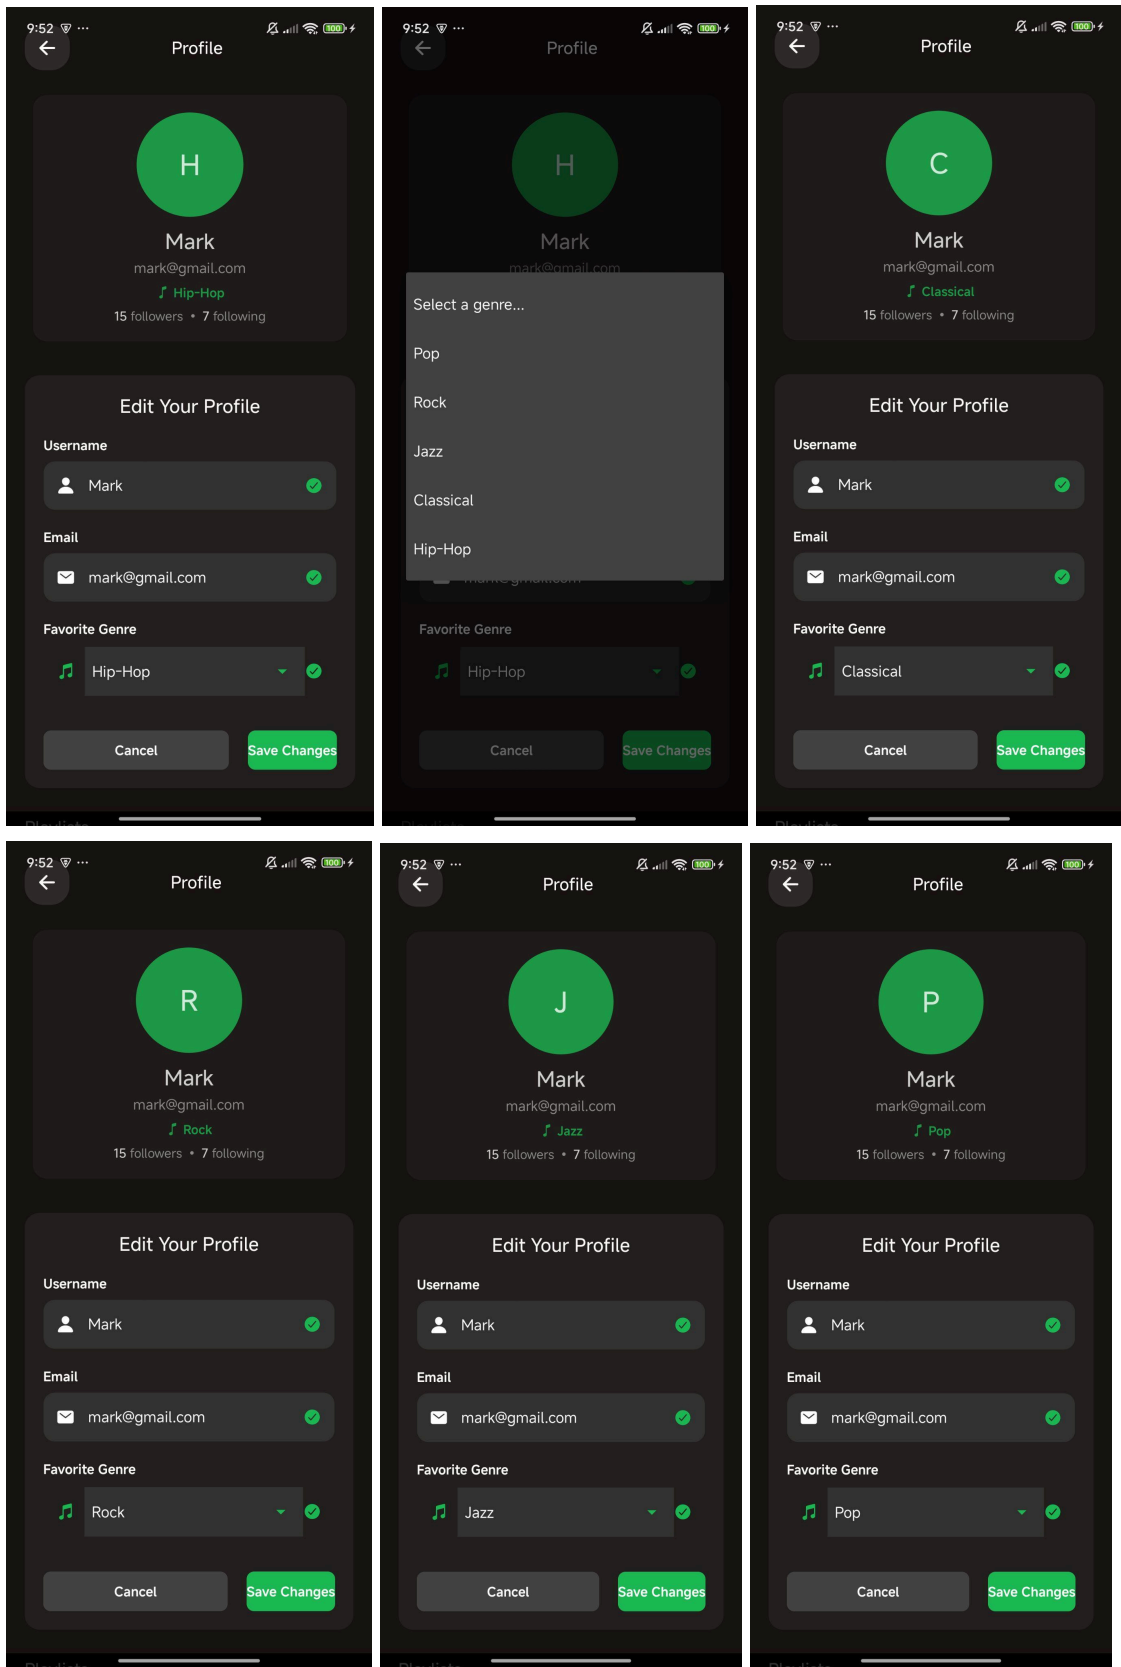

This feature allows users to easily revert or restore their most recent playlist modifications. When a user performs actions such as adding or removing songs, renaming a playlist, or editing playlist details, these changes are temporarily stored in a history stack. By tapping the Undo button, the app reverts the last action (e.g., removes a recently added song), while the Redo button restores the undone action if the user changes their mind.

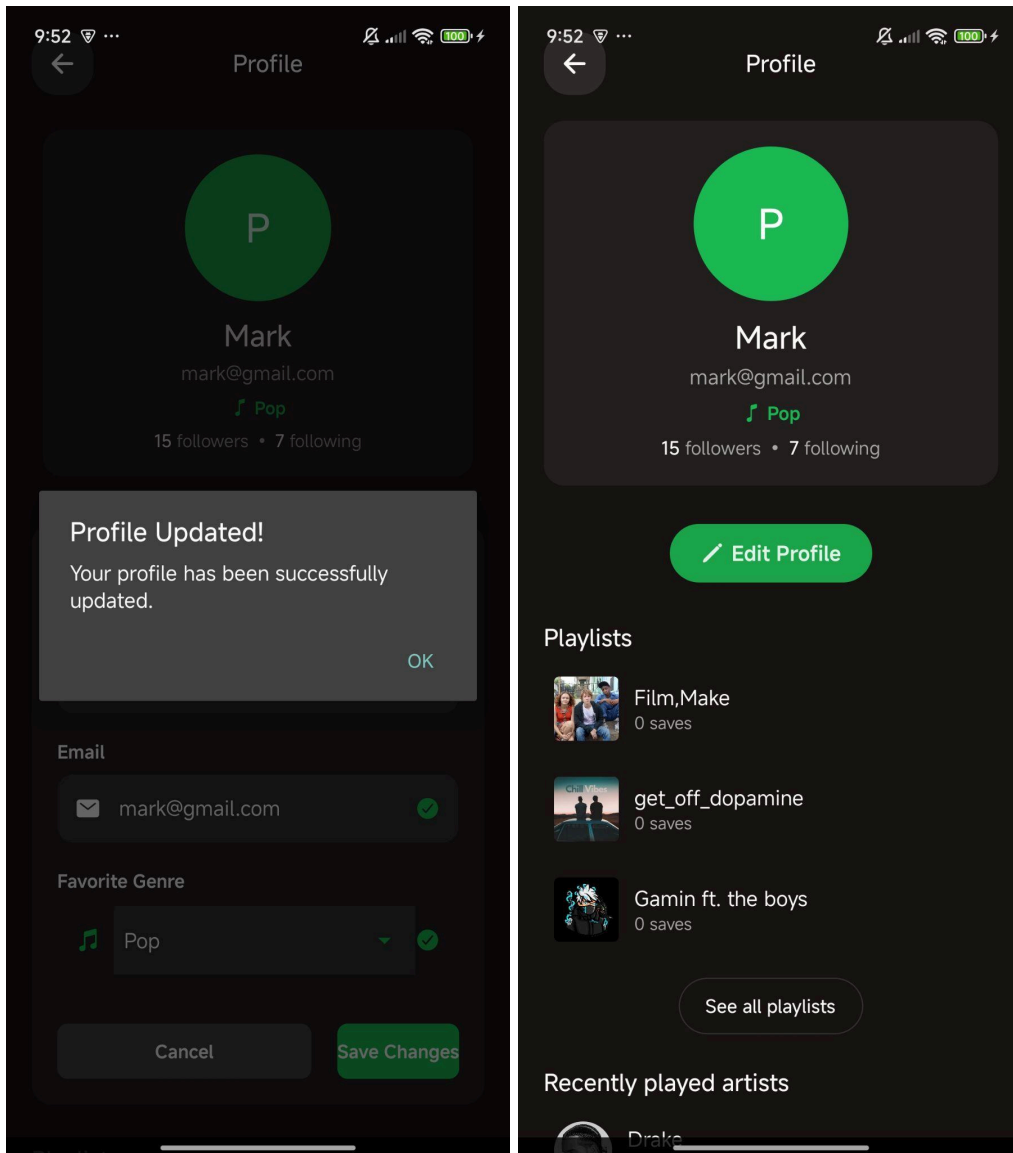

Build Profile Form with Enhanced Validation

Demonstrates the profile customization form with real-time validation for username, email, and favorite genre fields, including dynamic error messages.

Build Dynamic Profile Preview

Shows how the profile preview updates in real time the displayed genre dynamically changes the profile's icon and theme to match the selected music style.
